Underside of Chainring

We're all about being unique and bringing performance upgrades to your bike!

The new SUPA-X chainring continues this vision and goal.

Designed to be the stiffest and most efficient chainring on the BMX market, our unique "solid disc" design mimics what has become popular in other cycling disciplines where a 1x gearing is required to deliver efficient and smooth power transfer through the drivetrain.

Crafted using 7075 Alloy and 100% CNC Machined these not only look the goods but are also extremely detailed to balance the demands of power transfer and lightweight.

- 104 Bolt Circle Diameter
- Threaded 4-Bolt Pattern
- 5mm thickness & different sizes available
- Black Anodized Finish (Standard)
- Custom Cerakote™ Finish (Optional)
- Laser-Etched Graphics and detailing

MATERIAL // 7075 Alloy

WEIGHT // 157g (45T)
